An international archive for Hewlett Packard

The Challenge

To make the tremendous body of useful public domain, freeware and Open Source software available to the wider public to users of Hewlett Packard UNIX systems not just those capable of configuring and compiling software.

The Solution

We developed HP's first internet project (initially in 1992 when Internet usage was still in its early infancy) by creating the world's largest single online archive of free software for Hewlett Packard UNIX systems and we continue to develop the archive. Updates to the site are now automatically distributed to the mirror HP Archive sites in the US and the Netherlands facilitating 'local' access and faster downloads. We continue to configure and port Open Source packages (in both source and binary formats) to HP-UX, as well as provide a fully managed hosting service and remote management of the mirror sites for Hewlett Packard's archiving system.

The Results

The archive comprises almost 2,000 software packages, with over 150,000 free software packages per month being distributed, reaching over 70 countries.
