## Health and Safety Laboratory content manage their public website

Connect are continuing to build on their relationship with **Health and Safety Laboratory (opens new window)** and have recently been awarded the contract to develop a new back end solution for their public website.

Originally formed as part of the Health & Safety Executive, HSL now work with a range of organisations carrying out research, development work and incident investigations. As their work in the private sector increases and their commercial success continues, they look to utilise their website more and more as a marketing and communication tool.

Traditionally built using Dreamweaver templates, Connect worked with HSL back in 2008 to develop a new look and feel for the site, building a number of templates for the client. However, following the successful launch of their intranet using the Umbraco CMS solution in March 2009, HSL have decided to move their public website maintenance over to the same CMS solution, whilst continuing to maintain the current look and feel and site content.

Due for launch in late October, the development work is completed and content migration is now underway.
