## Umbraco CMS

Managing a corporate website, extranet or intranet presents significant challenges. As a common business tool your website must offer your customers, partners and employees relevant and high-quality content.

**Umbraco** is a content management system (CMS) that gives you the flexibility, responsiveness and control over your content. It makes it easy for non-technical staff to update and maintain information without requiring expensive technical support resources.

As Umbraco is web-based there is no software to install. The system is accessed via a web-browser, so that your staff can update your site wherever there is Internet access and a PC.

Umbraco gives your staff the appropriate control over information, whilst delivering real cost savings by reducing long-term maintenance costs.

You can check out three Umbraco-based web sites below (all links open a new window):
