New online system for Health and Safety Laboratory

Connect is delighted to announce that it will be working with Health and Safety Laboratory (HSL) to develop an online database and reporting system to assist with the management of their Incident Sample processes. The new online Incident Sample Management system will replace the existing standalone one and will include additional functionality and enhance client usability.

Connect's Account Manager, Duncan Sime, said "We are delighted to be commissioned for this work; it gives a real opportunity to work again with one of the most prestigious science laboratories in the world. We're confident of working in partnership with HSL to deliver a system that will enable them to demonstrate robust management of sample storage, custody and disposal."

The site will be built using .NET and MS SQL. User support will be provided through our accredited training services.
